Subject:

10/649,273

For 10/649,273, pls search and interference search:

SID 2, full-length, against the NT and AA data bases

SID 2, residues 148-414, against the NT and AA data bases

SID 2, residues 176-414, against the NT and AA data bases

#### Search Notes

Examiner Swope,

Here are the results for your recent search request.

Please feel free to contact me if you have any questions about these results.

Thank you for using STIC services. We appreciate the opportunity to serve you.

Sincerely,

Mary Jane Ruhl Technical Information Specialist STIC Remsen 1-A-62 Ext. 22524

# Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated

- accession number. permanent accession numbers. The new UniProt record may not contain the previous temporary numbers from the most recent version of UniProt. These sequences have been assigned new Please note that the curators of the UniProt database have purged some temporary accession
- accession number can be found by searching the old accession number in the UniProt Protein extension .rup) that can no longer be found in the database, the permanent record with the new If you encounter an accession number from an older search run against UniProt (results file Archive database (UniPARC) at

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher

include a copy of this attachment to assist any future Examiners or numbers. members of the public who may encounter UniProt temporary accession When submitting sequence search results for scanning into IFW, please Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches. Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and neurological disorders.

Claim 5; Fig 1A-C; 473pp; English.

The invention describes an isolated nucleic acid molecule (I) encoding a metalloprotease (MP-1). (I) is useful for preventing, treating, or

The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, Huntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This is the amino acid sequence of a metalloprotease MP1 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents human O-sialoglycoproteinase-like protein (OSGPLP). The present invention also describes: (1) the preparation of the OSGPLP protein; (2) applying the OSGPLP protein in diagnosis; (3) the prevention and/or treatment of related diseases; (4) utilising the OSGPLP protein in screening its agonist, excitomotor and inhibitor and preparing an antibody against the OSGPLP protein; and (5) the use of the OSGPLP polynucleotide sequences, proteins, agonists, excitomotors, inhibitors and antibodies in treating diseases related to the abnormal OSGPLP gene and in preparing the medicine composite for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 414

```
The invention relates to an isolated polypeptide comprising: any of 28 CC sequences of 48-1256 amino acids; a natural amino acid sequence at least CC 90% identical to the 28 amino acids sequence, 94% identical to a sequence CC of 703 or 267 amino acids, 96% identical to a sequence of 414 amino CC the specification; or a biologically active or immunogenic fragment of CC the isolated polypeptide. The polypeptides and polymucleotides are useful CC in diagnosing, treating and preventing diseases or conditions associated With the decreased expression of protein modification and maintenance CC molecules (PMOD), such as cell proliferative diseases (e.g. cancer, CC allergies), neurological disorders (e.g. stroke, Parkinson's disease, CC endometriosis), autoimmune/inflammatory diseases (e.g. AIDS, CC endometriosis), developmental (e.g. ulcer, cirrhosis), reproductive (e.g. cancer, CC endometriosis), developmental (e.g. ulcer, cirrhosis), reproductive (e.g. concertions), concertions (e.g. bacterial, viral, parasitic, protozoal). These are also CC useful in assessing the effects of exogenous compounds on the expression CC useful in assessing the effects of exogenous compounds on the expression CC tragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the traget polynucleotide and compounds that specifically bind to or modulate CC the activity of the polypeptide. The microarray is useful in monitoring cof the invention protein interactions, drug-target interactions, and coffice invention.

                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                    ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel 38650, 28472, 5495, 65507, 81588 CC or 14354 nucleic acid molecules which encode adenosine deaminase, glyco-grotease or seven transmembrane domain (7TM) receptor family members.

CC Sequences of the invention are useful in diagnosing and treating cancer cor aberrant cellular proliferation and/or differentiation (e.g. colon or lung cancer), immune disorders (e.g. selective IgA deficiency, rheumatoid arthritis, diabetes, allergy), heart or cardiovascular disorders (e.g., hypertension, atherosclerosis, arrhythmias, ischaemic heart disease, compocardial infarction, thrombus) including endothelial cell disorders (e.g., psoriasis, Grave's disease), haematopoietic disorders, brain cc disorders (e.g. cerebral oedema, Parkinson's or Alzheimer's disease), call and metabolic disorders (e.g. disorders (e.g. disorders (e.g. diagnostic assays, prospective medicine (e.g. diagnostic assays, prospective medicine (e.g. diagnostic assays, prospective medicine calds may also be used in chromosome mapping, tissue typing and consider of the invention are also used in gene therapy. The present sequence is human glycoprocease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid molecules, useful for diagnosing and treating cancer, immune, cardiovascular, hematopoietic, brain, pain, metabolic, liver or platelet disorders, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-NOV-2000; 2000US-0246768P.

             The invention describes isolated 38650, 28472, 5495, 65507, 81588 and CC 14354 nucleic acid molecules (I) and their encoded polypeptides (II). The CC 38650 nucleic acid molecule comprises a sequence encoding adenosine CC deaminase. The 28472 nucleic acid molecule comprises a sequence encoding CC a human glycoprotease. The 5495, 65507, 81588 and 14354 comprise CC sequences that encode a human seven transmembrane domain (7TM). The CC 38650, 28472, 5495, 65507, 81588 or 14354 nucleic acid and polypeptide CC with or at risk of developing a disorder, e.g. cancer or aberrant CC cellular proliferation and/or differentiation (e.g. breast, ovarian, CC prostate, colon or lung cancer), immune disorders, hematopoietic disorders, CC cardiovascular disorders, endothelial disorders, hematopoietic disorders, CC blood vessel disorders, brain disorders, pain and metabolic disorders, CC liver disorders or platelet disorders. These disorders include carcinoma, CC prostate of the colon 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 breast cancer; ovarian cancer; prostate cancer; colon cancer; lung cancer; immune disorder; heart disorder; cardiovascular disorder; lendothelial disorder; hematopoietic disorder; blood vessel disorder; brain disorder; pain; metabolic disorder; liver disorder; disbettes; platelet disorder; carcinoma; sarcoma; leukaemia; Hodgkin's disease; autoimmune disorder; hypertension; atherosclerosis; heart failure; myocardial infarction; ischaemic heart disease; Crohn's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New adenosine deaminase, glycoprotease and seven transmembrane domain nucleic acids and polypeptides, designated 38650, 28472, 5495, 65507, 81588 and 14354, useful for treating e.g. leukemias, Hodgkin's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-NOV-2000; 2000US-0246768P.

The invention relates to an isolated 38650 (encoding adenosine CC deaminase), 28472 (encoding a dyxcoprotease), 5495 (encoding a 7 CC transmembrane receptor), 65507, 81588 or 14354 nucleic acid molecule (or CC a sequence which is at least 60% identical to the six nucleic acids or CC naturally occurring variants, or a DNA insert of the plasmid deposited CC with the American Type Culture Collection as Accession No. not defined in CC the specification, which encodes the amino acid sequence). Also included CC are a host cell containing the nucleic acids (used to produce the CC are a host cell containing the nucleic acids (used to produce the CC the polypeptide, and identifying a compound that binds to/modulates the CC activity of the polypeptide. The nucleic acid molecules, polypeptides and CC methods are useful for diagnosing, treating cancer, aberrant cellular CC cardiovascular disorders including endothelial cell disorders, pain CC cardiovascular disorders including endothelial cell disorders, pain and metabolic disorders are given in the specification). The present CC cardiovascular disorders are given in the specification). The present
                                         sequence is the Human glycoprotease encoded by cDNA 28472
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4;

Yamamoto J,
                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases in which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cytostatic; Anti-inflammatory; Osteopathic; Neuroprotective; Nootropic; Gene Therapy; human; secretory protein; membrane proteins; cancer; inflammatory disease; osteoporosis; neurological disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                       The invention describes an isolated nucleic acid molecule (I) encoding a CC metalloprotease (WP-1). (I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an CC ameriorating a medical condition, particularly an immune disorder, an CC amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for disposing, prognosticating, treating, ameliorating and/or treating disorders (CC associated with MP-1 activity, e.g. diabetes, cancer, reproductive CC disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kalman syndrome, CC or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, CC and renal disease, Huntington's disease or Tourette syndrome), liver and renal diseases, Huntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis CC or sepsis), pulmonary diseases (e.g. pueumonia, emphysema or cystic CC fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This is the amino acid CC sequence of a metalloprotease MP1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Metalloprotease; MP-1; immune disorder; glutamate transport; cancer; motor neuron disorder; amyotrophic lateral sclerosis; ALS; diabetes; reproductive disorder; Kleinfelter's syndrome; gerninal cell aplasia; genital wart; metabolic disorder; premature puberty; Kallman syndrome; cushing's syndrome; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Huntington's disease; Tourette syndrome; sepsis; liver disease; renal disease; immune disorder; rheumatoid arthritis; acquired immunodeficiency syndrome; AIDS; pulmonary disease; pneumonia; emphysema; cystic fibrosis; vascular disorder; inflammatory disorder; neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinase activity, e.g. immune, metabolic, inflammatory and neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 5;

                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                 the ygjD family, after the name given to the Escherichia coli family member. These proteins are essential for the survival of both Gram negative and Gram positive bacteria, although no function has as yet been ascribed to these proteins. The ygjD proteins, fragments of ygjD proteins (for example, fragments encompassing one or more conserved ygjD motifs such as AAY52318-Y5284) and nucleotides encoding them can be used to identify antagonists and broad spectrum antibacterial compounds. These antagonists and compounds can be used to treat a wide range of bacterial infections. New antibiotics are urgently needed, as serious bacterial infections and antibiotic resistant strains are becoming increasingly prevalent. The proteins of the invention are essential proteins for bacterial viability, and represent new targets for antibiotics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel bacterial polypeptides used to identify broad spectrum antibiotics.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
aberrant glutamate transport or motor neuron disorder, such as amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasia), metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Puntington's disease or Tourette syndrome), liver and renal diseases and immune disorders (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. pneumonia, emphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Metalloprotease; MP-1; immune disorder; glutamate transport; cancer; motor neuron disorder; amyotrophic lateral sclerosis; ALS; diabetes; reproductive disorder; Klainfelter's syndrome; germinal cell aplasia; genital wart; metabolic disorder; premature puberty; Kallman syndrome; Cushing's syndrome; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Huntington's disease; Tourette syndrome; sepsis; liver disease; renal disease; immune disorder; rheumatoid arthritis; acquired immunodeficiency syndrome; AIDS; pulmonary disease; pneumonia;
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated nucleic acid molecule (I) encoding metalloprotease (MP-1). (I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid encoding MP-1 protein, useful for preventing, treating, or ameliorating diseases associated with aberrant metalloproteinse activity, e.g. immune, metabolic, inflammatory and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-FEB-2001; 2001US-0266518P.

                the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Wang

The invention describes an isolated nucleic acid molecule (I) encoding a metalloprotease (MP-1). (I) is useful for preventing, treating, or ameliorating a medical condition, particularly an immune disorder, an aberrant glutemate transport or motor neuron disorder, such as amyotrophic lateral sclerosis (ALS), its juvenile form or an ALS-like condition. The compositions and methods are also useful for diagnosing, prognosticating, treating, ameliorating and/or treating disorders group rognosticating, treating, ameliorating and/or treating disorders associated with MP-1 activity, e.g. diabetes, cancer, reproductive disorders (e.g. Kleinfelter's syndrome, genital warts, or germinal cell aplasial, metabolic disorders (e.g. premature puberty, Kallman syndrome, or Cushing's syndrome), neurodegenerative diseases (Alzheimer's disease, Parkinson's disease and immune disorders (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. AIDS, rheumatoid arthritis or sepsis), pulmonary diseases (e.g. memphysema or cystic fibrosis) and vascular, inflammatory and neurological disorders (e.g. Alzheimer's disease or Parkinson's disease). This is the amino acid sequence of a metalloprotease MP1 associated protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 130;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
